Oral Cancer Screening and Prevention and Awareness program

Smoking and other tobacco (gutkha, khaini etc:) use are associated with about 75 percent of oral cancer cases . Mouth and throat cancer is the sixth most common malignancy reported worldwide with the Indian sub-continent accounting for one-third of the world burden. Changing lifestyle or eating habits and avoiding things known to cause cancer are the best known ways to prevent cancer

Arivu

Training in Oral Cancer detection for dentists in rural practice.

Warn Them Young

A social initiative designed to educate middle and high school children about the ill effects of tobacco consumption. It includes a visual narrative and also offers an interactive session.

Facilities for mouth cancer detection and Vital staining are available at Samhitaa.
